Instructions

1. Remove existing panel from ceiling grid to expose the source of the leak.
2. Clear any debris from T-rail surface and place Leak Diversion System panel into opening.
3. Attach ceiling clips to T-rails, spacing them evenly along desired hose route. (The first clip should be attached to the T-rail that supports the Leak Diversion System panel.)
4. Cut drainage hose to length and attach to ceiling clips using adjustable hangers.
5. Adjust hangers so drainage hose slopes away from panel. (It may be necessary to join several hangers for longer drops.)
6. Firmly press end of hose over barbed outlet in center of panel.
7. Direct discharge end of hose to a floor drain or collection container.

Important Notes:

- The Drop-Ceiling Leak Diversion System is intended for use with water flows of up to 1 gallon per minute.
- Not for use with oils and chemicals
